CURRENT RESEARCH TOPICS IN PHARMACY: Microbiology Debates

December 14th, 2022 14.00 PM ISTANBUL

FOR REGISTRATION:

**First Session- Moderator: Büşra ERTAŞ 14.00-15.45 PM**

- **Welcome- Assoc.Prof.Esra TATAR**
- **Bacteriotherapy – Dr. Zahraa AMER HASHIM**
  Mosul University, Mosul, Iraq
- **Antibiotic resistance – Assist.Prof. Pervin RAYAMAN**
  Marmara University, Istanbul, Turkey
- **The vaccination in Albania : An assessment of the level of knowledge and behaviour of the population regarding vaccines.- Assoc.Prof. Mirela MIRAÇI**
  University of Medicine, Tirana, Albania
- **Chicken contamination with thermotolerant Campylobacter in Tunisia: Antibiotic resistance and virulence profiling –Dr.Awatef BEJAOUI**
  Institut Pasteur de Tunis, Tunis, Tunisia

**Second Session- Moderator: Esra TATAR 16.00-17.45 PM**

- **Plant phenolics and their synthetic derivatives as inhibitors of Helicobacter pylori : Suggestion for a new mechanism of action - Assoc.Prof. Simone CARRADORI**
  "G. d'Annunzio" University of Chieti-Pescara University, Chieti Italy
- **Pomegranate rind extract with Zn (II) combination as a new therapeutic agent for oral care products- Dr.Vildan ÇELİKSOY**
  Cardiff University, Cardiff, UK
- **The antimicrobial effects of honey and other bee-derived products- Dr.Saira KHAN**
  Cardiff University, Cardiff, UK

Chair
Prof. Hatice Kübra ELÇIOĞLU

Vice Chairs
Prof. Levent KABASAKAL & Assoc. Prof. Esra TATAR

ORGANIZING & SCIENTIFIC COMMITTEE
Editorial Board of Journal of Research in Pharmacy

CHICKEN CONTAMINATION WITH THERMOTOLERANT CAMPYLOBACTER IN TUNISIA: ANTIBIOTIC RESISTANCE AND VIRULENCE PROFILING

Awatef BÉJAOUI

University of Tunis El Manar (UTM), Laboratory of Epidemiology and Veterinary Microbiology, Group of Bacteriology and Biotechnology Development, Institut Pasteur de Tunis, Tunis, Tunisia

awatef.bejaoui@pasteur.tn

Thermotolerant campylobacters, particularly C. jejuni and C. coli, have emerged as the most common cause of bacterial foodborne disease worldwide, with a significant impact on human health and a corresponding economic burden. The major source of human infection is the handling and consumption of contaminated chicken meat. Furthermore, the emergence of antibiotic resistance in foodborne pathogens is currently considered a real global health concern. This is why we have undertaken a study to assess the occurrence of Campylobacter contamination in chicken carcasses and to investigate antimicrobial resistance (AMR), as well as the AMR molecular mechanisms. The study was performed on 257 samples collected from abattoirs and retail shops in northeastern Tunisia. The overall isolation rate (IR) was 18.7%, including 68.7% of C. jejuni and 31.2% of C. coli. The occurrence of Campylobacter was 23.2%, and 13% in samples from slaughterhouses and retail shops, respectively. The highest rate of Campylobacter contamination was observed in neck skin samples (31.3%), followed by giblets (14.7%), and meet (10%). Antibiotic resistance was tested against eight antibiotics and high resistance rates were observed against tetracycline (100%), erythromycin (97.9%), ciprofloxacin (73%), nalidixic acid (85.4%), ampicillin (83.3%), amoxicillin/clavulanic acid (22.9%), chloramphenicol (75%), and gentamicin (27.1%). All isolates were multidrug-resistant, and 22 resistance patterns were found. All isolates were screened for AMR genes and we detected: tet(O), tet(A), tet(B), tet(L), cmeB, ermB, blaOXA-61, and aphA-3. Moreover, we detected mutations in gyrA (C257T) and 23S rRNA (A2075G/A2074C) genes. The virulence genotypes were also determined, and all isolates carried the motility (flaA) and invasion (cadF) genes. Most of them also harbored the cdtA, cdtB, and cdtC genes, encoding the Campylobacter toxin. The screening of the cgtB and the wlaN genes, involved in Guillain-Barré Syndrome expression, revealed the presence of the cgtB in 21.2% of C. jejuni strains, whereas none of them carried the wlaN gene. Our findings highlight the emergence of Campylobacter strains simultaneously harboring several virulence and AMR determinants, which emphasizes the risk of transmission of MDR strains to humans via the food chain.

Keywords: Campylobacter, chicken, antimicrobial resistance, AMR determinants.
